

# **BROILER FEED COMPOSITION CONTAINING MUNGBEAN (*Vigna radiata*) REJECT MEAL**

## **Abstract of the Disclosure**

The present utility model discloses a feed composition for broiler chickens incorporating  
5 5% mungbean (*Vigna radiata*) reject meal as a partial substitute for conventional protein sources.  
The composition includes corn, soybean meal, rice bran, vegetable oil, vitamin-mineral premix,  
limestone, salt, and amino acid supplements. Mungbean rejects are sun-dried and ground before  
blending into the feed. The technical problem addressed is the high cost of protein sources in  
poultry feed. This utility model provides a cost-effective, sustainable alternative by utilizing  
10 agricultural by-products. The formulation improves body weight gain, feed conversion efficiency,  
and profitability without adverse effects on meat quality or organ health. It is intended for use as  
starter or finisher feed in broiler production systems.
